

# Advanced Privileging

## End-to-end electronic privileging

Privileging and credentialing are at the heart of patient safety. When your organization appoints providers using the most current and accurate privileging information available, you and your patients can be confident in the quality of care your providers deliver. And in the era of healthcare reform, which rewards quality over quantity, you need integration and insight for provider data management, including the ability to map codes (e.g., ICD, CPT, HCPCS) to privileges.

With **Advanced Privileging**, the entire privileging lifecycle is covered. Benefit from a full integration with other symplr Provider modules, such as Application Manager, Committee Manager, Provider Profile, Provider Lookup, and an optional integration with symplr Quality Review.

## Develop privilege content with confidence

Creating and maintaining privilege request forms to remain in compliance with current industry standards and regulations can be a daunting task. The process is labor-intensive and requires an error-free approach. With Advanced Privileging you can:

- Create and maintain privileges via access to the symplr Provider Privileging library, which includes competency criteria outside of standard ACGME and AOA curriculum-based training
- Review, customize, and easily edit privileges by specialty
- Place privilege request forms in draft format and publish once approved
- Create a new practice area; or add or update core and special privilege definitions
- Include text, such as page headers and signature lines, on privilege request forms
- Include education requirements for a practice area or privilege

Our industry experts use **approximately 40 resources** when researching content for privileges in a specialty such as:

- American College of Graduate Medical Education/American Osteopathic Association (ACGME/AOA)
- The Royal College of Physicians and Surgeons of Canada (RPSC)
- American Nurses Association (ANA)
- American Board of Medical Specialties (ABMS)
- American College of Cardiology (ACC)
- Society of American Gastrointestinal and Endoscopic Surgeons (ASGES)

**Corporate Privileging** functionality allows multi-entity clients to manage how specific entities view, modify, and share Practice Area and Privilege Setup records. You can specify all or a subset of privileges to apply across the entire organization or by facility or entity. In addition, enterprise-scale privilege publishing enables rapid rollout and updates to privileges across enterprises. While providing centralization, each entity maintains a clear view of their own medical staff's privileging data.

## Manage initial and ongoing privileges with ease

Getting your providers credentialed and privileged quickly and with confidence is critical to patient safety, clinician satisfaction, and kickstarting the revenue cycle. An end-to-end electronic privileges and provider data management system streamlines the process and ensures providers deliver only those procedures and services they are competent to perform.

- Allow providers to make digital requests for specific privileges
- Approve requested privileges via Committee Manager
- Identify privilege status: requested, approved, denied, not requested
- View current and past versions of a practice area or privilege
- Link CPT and ICD codes assigned to a practice area privilege
- Display delineated privileges in real-time with an online Privilege Lookup tool

## View a snapshot of requested and delineated privileges

The screenshot shows the symplr PROVIDER interface for Memorial Hospital. The user is viewing the 'Requested Privileges' section for John Smith, M.D. (1864). The interface includes a sidebar with navigation options like Home, Dashboard, Tasks (6), Inbox (250), and System. The main content area shows a table of requested privileges with columns for Entity, Practice Area, Privilege, Requested status, and Requested Date. The table lists six privileges, all of which are marked as 'Requested' and have a requested date of 04/07/2022.

Entity	Practice Area	Privilege	Requested	Requested Date
Memorial Hospital	Trauma Surgery	ACLS (advanced cardiac life support)	✓	04/07/2022
Memorial Hospital	Trauma Surgery	Acute thoracic injury, operative procedures	✓	04/07/2022
Memorial Hospital	Trauma Surgery	Airway management	✓	04/07/2022
Memorial Hospital	Trauma Surgery	Aortic cross-clamping	✓	04/07/2022
Memorial Hospital	Trauma Surgery	Arterial Line Placement	✓	04/07/2022
Memorial Hospital	Trauma Surgery	ATLS (advanced trauma life support)	✓	04/07/2022

## Maximize revenue and reduce risk with symplr Quality Review

As reimbursement models evolve and the need to show positive outcomes increases, it's become vital to monitor, benchmark, and report on provider performance. symplr **Quality Review\*** software automates workflows for peer review and focused/ongoing professional practice evaluation (FPPE and OPPE) and gives insight for education and improvement.
