DataVision Readmission Penalty Forecaster

The DataVision Readmission Penalty Forecaster allows health systems to prioritize today's hospital readmission reduction strategies for the clinical populations with the greatest risk for financial penalties tomorrow.

Predictive Insights

Replicates CMS's readmission risk models and penalty calculations up to three years before you receive your excess readmission reports from CMS

Identify Problem Cohorts and Trends

Prioritize your hospital readmission reduction strategies today for those clinical populations with the greatest risk for penalties tomorrow

Hospitals and health systems can now anticipate their excess readmissions and potential HRRP penalties from CMS before the performance period has elapsed.

Reduce Readmissions and Penalties

Prioritize your hospital readmission reduction strategies today for those clinical populations with the greatest risk for penalties tomorrow

Quarter Data Reviews

Customized to your organization

Defined Analysis for 6 CMS Cohorts:

- AMI (Acute Myocardial Infraction)
- Heart Failure
- Pneumonia
- COPD (Chronic Obstructive Pulmonary Disease)
- CABG Surgery (Coronary Artery Bypass Graft)
- THA/TKA (Total Hip And/Or Total Knee Arthroplasty)

Your Patients

compared to over 4M Medicare patients to calculate Excess Readmissions.

Using our analytics engine to compare accumulated Risk Factor claims spanning:

- 2,819,022 Home Health Visits
- 1,769,735 Hospice Visits
- 4,669,255 Inpatient Visits
- 6,438,336 Outpatient Visits
- 2,158,005 Skilled Nursing Facility Visits
