

# EMR Event Linking for Midas Care Management

Spend less time completing event reports and more time at the bedside for patient care

EMR Event Linking, a web-based application and part of Midas Care Management (CM), allows front-line staff to report patient safety events and patient experiences quickly and easily. This integration capability with EMRs eliminates the need for additional patient lookup and reduces the number of screens users must open to complete event reports. EMR Event Linking automatically populates many required fields with data from the EMR, streamlining the workflow, and empowering staff to spend less time entering patient data and more time caring for patients.

## Key benefits

- **Streamline workflows at the Encounter and Patient levels** by reducing the number of screens for input
- **Seamless click integration** between EMR and Midas for Remote Data Entry (RDE) event reporting
- **Increase the number and accuracy** of patient events reported
- **Reduce human error** of patient lookups by automatically linking to the right patient
- **Improve employee satisfaction** through an improved workflow and ease of entry
- **Give time back** to frontline staff to care for patients

## Improve event reporting and increase user satisfaction

Ease of reporting enables greater efficiencies through increased event reporting and accuracy. All while giving clinicians time back to provide patient care and improve their satisfaction through streamlined workflows at the Patient and Encounter levels with EMR Event Linking for Midas Care Management.
