

SYMPLR ENTERPRISE SUITES

# Quality Suite

Improve operational and clinical performance, compare against curated benchmark data, and **gain visibility enterprise wide**. Track and trend performance over time, proactively manage and mitigate risk, **make data-driven decisions** amid regulatory changes, and **foster a safe care environment** for all.

**Midas Care Management**

Simplify Data Gathering,  
Collaboration, And Reporting

**Midas DataVision**

Quickly Pinpoint Areas To Improve  
Hospital Performance

**Midas Stattt**

Automate Burdensome  
Administrative Tasks  
And Reporting

“

We can look at data across all our markets for our primary care population. We're able to look at different data sources and ... do more advanced analytics, like [generate] composite clinical risk scores to stratify our populations.”

Director of analytics and technology,  
symplr Quality Suite customer

**\$19.5 Billion**

*Estimated annual cost of additional medical and short-term disability expenses associated with medical errors*

National Conference of State Legislatures

**The Opportunity**

# Make sound clinical and financial decisions using complete knowledge

Health systems' financial viability is tied directly to quality outcomes. Coordinating care, evaluating and demonstrating quality, identifying risks, and monitoring compliance requires an all-hands approach in today's complex care delivery ecosystem.

When data is spread throughout multiple sources and systems, quality is difficult to measure and maintain. Health systems must collect the right data, measured in a way that provides actionable insights for health plans, regulators, and, more importantly, for patients and providers.

Clinicians need holistic, actionable analytics benchmarked against care standards to take fast and decisive action. Technology investments must increase efficiency, support organizational needs at scale, and protect your organization from unknown financial disasters.

symplr  
**Midas Care Management**

**Make better decisions and improve patient outcomes**

Aggregate and synthesize data from multiple sources, track and trend performance over time, simplify collaboration and reporting, and deepen data insights.

**Key Capabilities**

- Automate data entry of quality events data and outcome data through a real-time platform.
- Define and document the steps and reviews through multiple individuals, services and committees to final disposition of peer review process.
- Consolidate data from multiple sources to produce robust reports that generate actionable outcomes.
- Enables organization to track and trend adverse patient safety and patient relations events by facility, location, event type, and many other data elements.
- Automate case assignment based on prioritization and rules logic such as facility, location, room, service, payer and more.
- Identify notifications for real-time updates, early intervention, or changing data that impacts clinical decision-making.

**Key Benefits**

- Monitor and improve quality in real time to elevate care and outcomes.
- Gain a holistic view of risk across your organization.
- Facilitate care across the continuum with an entirely electronic workflow.
- Improve readiness for and performance on The Joint Commission (TJC) audits.
- Identifies trends from patient feedback to drive organizational process improvements.
- Enhance hospital profitability through more efficient and effective patient care and workflow efficiency.

symplr  
**Midas DataVision**

**Evaluate performance using one of the largest concurrent comparative databases**

Instantly access enterprise-wide quality data and regulatory measures to identify hospital performance, patient safety, and quality performance areas where improvement is in order.

**Key Capabilities**

- 30,000-plus indicators to track and analyze clinical utilization and provider practice patterns, evaluate high-risk populations, and meet legal and accreditation reporting requirements
- Evaluate performance and benchmark it against peer organizations using one of the nation's largest concurrent comparative databases
- Up-to-date comparative data on penalty-based measures impacting quality + financial improvement
- Forecast projected readmission penalties with recommended steps to minimize.

**Key Benefits**

- Reduce costs by reducing length of stay, unnecessary admissions/treatments and readmissions.
- Identify areas for improvement while freeing up analysts to focus on interpreting data.
- Increase visibility for reimbursements/potential penalties, write-offs, risk of litigation, and claims loss by improving clinical processes adjusted for volume and severity.
- Identify areas for improving hospital performance, patient safety, and quality performance.

symplr  
**Midas Statit**

**Summarize provider or organizational performance to meet regulations, drive improvements**

Automate burdensome administrative tasks and free up time for patient care using customizable scorecards that summarize provider performance. Report progress on attaining the five principals of high-reliability organizations.

**Key Capabilities**

- Access and display existing Midas data, databases, spreadsheets, and ancillary data sources
- Monitor and measure physician performance and practice patterns in alignment with strategic objectives
- Access data from disparate systems to compare physician performance against targets, alarms, and thresholds
- Provide process experts with interactive capabilities to validate new data, initiate a new phase, and create comments and action plans
- Automated workflows and notifications to save time and streamline the peer review process

**Key Benefits**

- Meet Ongoing Professional Practice Evaluation (OPPE) and peer review requirements
- Cut through the clutter to focus attention on improvement initiatives, armed with a better understanding of process variation
- Provide process experts with interactive capabilities to validate new data, initiate a new phase, and create comments and action plans
- Identify which providers are truly performing differently from their peers

## We fervently believe that better operations can transform healthcare.

We offer software and services that improve your operations. Our solutions make clinician recruiting and credentialing easier, sharpen communications between clinical staff, and make facilities safer.

### 30 years focused on healthcare operations

- 5000+** Customers
- 60%** reduction in time managing contracts
- 90%** reduction in potential penalties
- 75%** reduction in time to reimbursement
- 5M+** workers touched by symplr solutions
- One** singular focus: healthcare

### symplr is recognized with industry awards
