The Opportunity

Disparate time, attendance, and scheduling systems exacerbate workforce management challenges

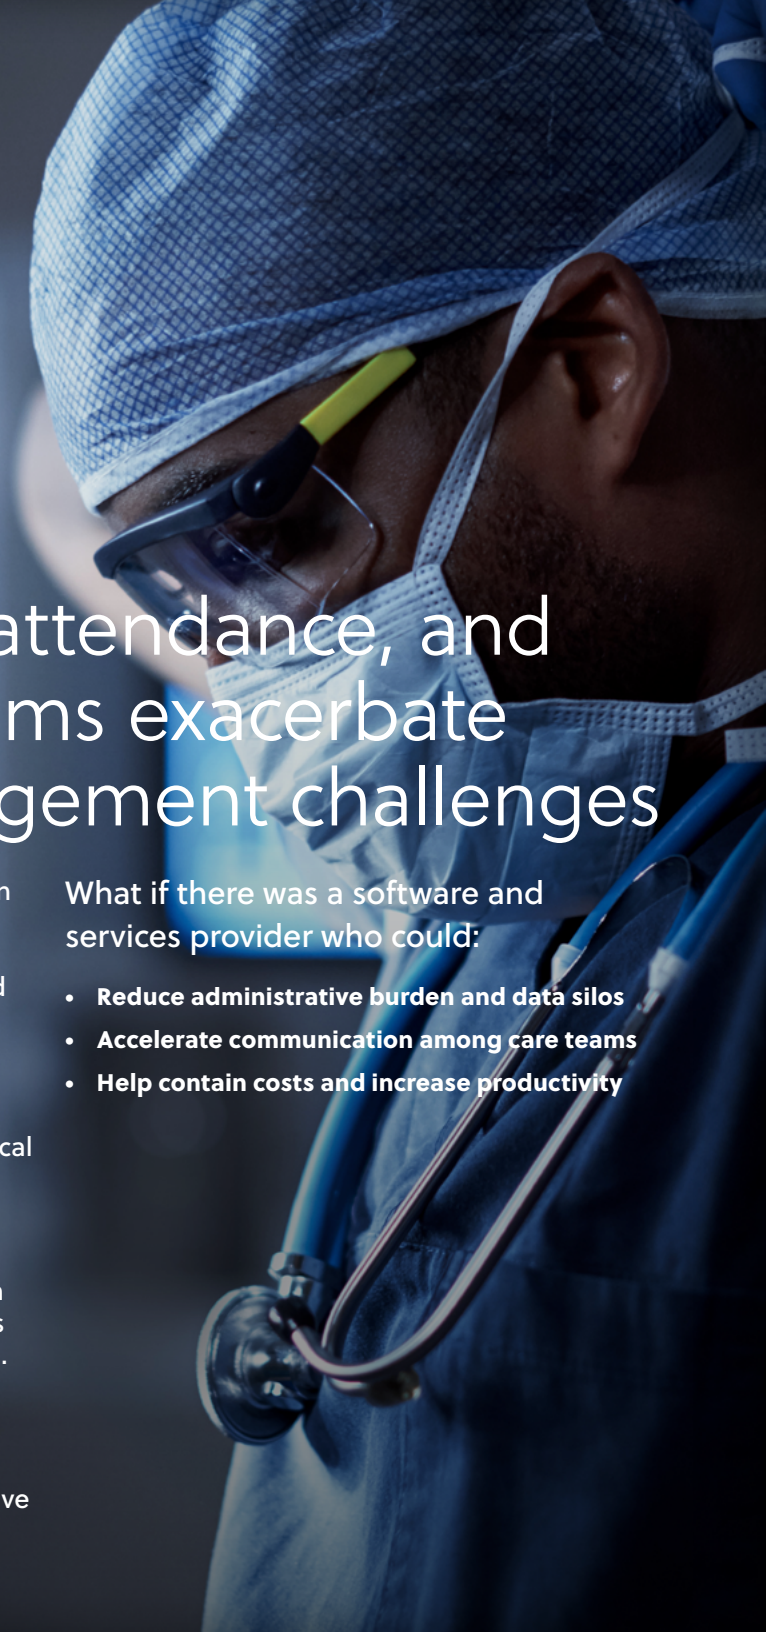

Workforce management remains a top concern for healthcare CEOs*. New challenges and expectations of clinicians and staff have dramatically changed, accelerated and shaped by the pandemic. In the face of workforce shortages and economic turbulence, health systems look to technology and software to control labor costs, staff burnout and communication breakdowns that lead to medical errors.

Yesterday's siloed software doesn't address retention, staffing, and communications challenges. Organizations are now investing in new approaches and solutions to meet today's needs that improve your clinicians' experience.

Healthcare providers must support a streamlined, system-wide approach—and it can be done using a single source of truth to create efficiencies and reduce the administrative burden on staff.

What if there was a software and services provider who could:

- **Reduce administrative burden and data silos**
- **Accelerate communication among care teams**
- **Help contain costs and increase productivity**

symplr
Workforce

Integrate timekeeping, scheduling, and analytics to improve collaboration and maximize productivity

symplr Workforce is our cloud-based, integrated solution offering streamlined workflows and enhanced analytics. Its mobile technology supports the unique, complex, and changing demands of the healthcare workforce. Rely on a modern, connected solution that draws upon symplr's 30-plus years of experience partnering with provider organizations.

Key Capabilities

- Access to actionable data and analytics
 - Track and reduce premium pay and unplanned hours
 - Manage preventable overtime
 - Monitor labor and staffing compliance
 - Identify potential staffing safety risks based on hours worked
 - Predict staffing requirements using census trends
- Manage all clinical and non-clinical roles
- Offer staff an integrated, mobile experience to manage time, attendance, and scheduling on-the-go
 - Smart self-scheduling
 - Shift trades
 - Request open shifts
 - Time card sign off
 - Missed clocking alerts
 - Location mismatch notification
 - Location-enabled clocking
 - Open shift notification

Key Benefits

- Optimize clinical and non-clinical staff enterprise wide
- Contain labor costs
- Increase collaboration between managers and employees
- Maintain compliance
- Improve staff satisfaction and retention
- Improve patient outcomes

symplr
Physician Scheduling

Automates and standardizes the physician scheduling process

A physician-designed, automated, web-based solution, symplr Physician Scheduling helps to manage the complexities of physician scheduling and pay policies, ensuring appropriate staffing with the ability to adjust as needed.

Key Capabilities

- Staff can auto-generate schedules and sync work schedule with personal calendar apps
- Foster collaboration via assignment-swapping capability
- Manage operating room scheduling
- Maintain a single source of truth with up-to-date information
- Create standardized reports to track vacation and work
- Create customized reports to meet the needs of unique incentive plans
- Use payroll integrations and automation
- User-managed time off processes
- Handle complex logging of schedule changes
- Track hours worked based on assigned shift

Key Benefits

- Reduce administrative burden, freeing clinicians from non-billable, cumbersome tasks
- Increase staff engagement and retention
- Improve compliance
- Contain costs
- Improve patient outcomes

symplr
Clinical Communications

Accelerates communication and collaboration among care teams

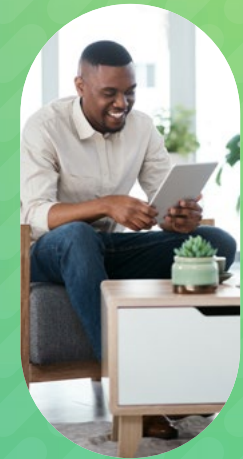

Developed by clinicians, symplr Clinical Communications unifies communication channels in a single platform for messages, calls, critical results, alerts, and on-call schedules. The result: streamlined schedule-driven, role-based communication across all points of care—ambulatory, acute, and post-acute care.

Key Capabilities

- Connect teams, roles, and providers within the ecosystem
- Make contact information known to all within the community to ease communication
- Support teams within teams or cascading teams; streamline dynamic roles within multiple teams
- Assign a proxy to cover and screen messages to prevent interruptions during care delivery
- Use a native mobile application with familiar interface, easing onboarding and therefore adoption.
- Flag unnecessary messages and run reports to aid in improvement initiatives
- HIPAA compliant, HITRUST and SOC II certified

Key Benefits

- Streamline communications and connect workflows for improved care delivery
- Increase efficiencies and save time when communicating with role-based care teams
- Consolidate devices and cut costs
- Decrease length of stay
- Improve patient outcomes
- Improve compliance
