

Committee Manager

We know how difficult it is to get all of your committee members together to review initial and reappointment applicants.

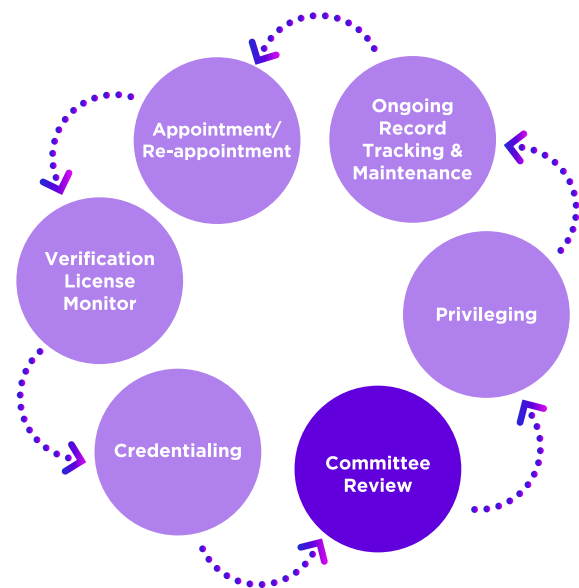

Committee Manager transforms the traditional committee review process by organizing and conducting the provider review process electronically. Not only can you save time and paper, you can also increase participation by offering your committee members the flexibility of participating at a time that fits their schedules.

For the greatest ease of use, reviewers can open their work queues, review candidate profiles, and make recommendations via the Committee Manager interface wherever they have access to the internet.

Committee Manager facilitates traditional review meetings by electronically organizing and displaying provider data to meeting participants.

The most accurate and up-to-date credentialing and demographic data required for the approval process is stored inside the symplr Provider information repository. Committee Manager bypasses the paperwork, inefficiency and privacy issues that are encountered when maintaining key review data in the Medical Staff Office.

Committee members can

- View profile information such as addresses, boards, licenses, education, privileges, and more
- Render an assessment
- Post comments/questions for other reviewers within the committee and connect directly with your office
- See that other reviewers have recommended approval
- Submit a recommendation electronically
